Data in Many Forms. . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Vital Statistics and Health Status Section,
Health Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 991-1772)
or to the Statistics Canada reference centre in:

| | | | |
|------------|------------|----------------|------------|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (949-4020) |
| Montréal | (283-5725) | Regina | (359-5405) |
| Ottawa | (990-8116) | Edmonton | (420-3027) |
| Toronto | (966-6586) | Vancouver | (666-3691) |

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Des données sous plusieurs formes. . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolinguistique et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section de la statistique de l'état civil et de la santé,
Division de la santé,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 991-1772)
ou au centre de consultation de Statistique Canada à:

| | | | |
|------------|------------|----------------|------------|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (949-4020) |

Introduction

The official mortality statistics for Canada are published in the annual report, *Vital Statistics* (Catalogue 84-206). This publication contains tables on deaths, by cause of death, but classified according to a summary list. In order to meet the need for more detailed data on causes of death, two publications, *Causes of Death, Canada, 1950-1960* (Catalogue 84-514) and *Causes of Death, Canada, 1958-1964* (Catalogue 84-519) provided national totals on the numbers of deaths according to the (detailed) three-digit categories and four-digit sub-categories of the 6th and 7th Revisions of the *International Classification of Diseases*, which were put into effect in Canada in 1950 and 1958 respectively.

To meet the demand for more current and still further detailed data on causes of death, these publications were converted to a regular annual report beginning with the 1965 data year and the report expanded to include the current year's deaths according to the three- and four-digit categories of the International Classification, by sex and province of residence of the decedent and by sex and five-year age groups for Canada. The present report is the 21st such report in this expanded series.

The present report is based on the 9th Revision of the *International Classification of Diseases* (ICD-9) which was put into effect in Canada in 1979. Restructuring of the Classification and some changes in the international underlying cause selection rules have resulted in some break in continuity with previous revisions. Therefore, comparisons of data coded by more than one revision are difficult. Any direct comparisons of ICD-9 categories with previous revisions, either by category number or disease title, should be made with reference to both the ICD-9 and the previous classification(s). In this respect, particular care should be taken with certain categories or sections of the ICD-9, these include; category 558 which contains conditions previously classified to the infectious disease chapter: category 579 which includes some conditions previously found in the chapter on endocrine disorders; categories 390-398 and 424 where assumptions of rheumatic origin are no longer made for certain conditions; categories 401-402, 414 and

Les statistiques officielles concernant la mortalité au Canada sont publiées dans un rapport annuel intitulé *La statistique de l'état civil*, (n° 84-206 au catalogue). Cette publication contient des tableaux sur les décès selon les causes de mortalité, mais elles sont classées d'après une liste sommaire. On pouvait trouver des données plus détaillées sur les causes de mortalité dans deux publications: *Causes de décès, Canada 1950-1960* (n° 84-514 au catalogue) et *Causes de décès, Canada 1958-1964* (n° 84-519 au catalogue), qui fournissaient des totaux nationaux concernant le nombre de décès, selon les catégories détaillées à trois chiffres et les sous-catégories à quatre chiffres des 6^e et 7^e Révisions de la *Classification internationale des maladies* (CIM), qui ont été publiées au Canada en 1950 et 1958 respectivement.

Afin de satisfaire à la demande de données plus récentes et encore plus détaillées sur les causes de mortalité, ces publications furent converties, à partir de 1965, en un rapport annuel régulier qui fut élargi pour inclure les décès de l'année visée par catégorie à trois et à quatre chiffres de la CIM, selon le sexe et la province de résidence de la personne décédée, et selon le sexe et les tranches d'âge de cinq ans pour le Canada. Le présent rapport est le 21^e de cette série.

Il s'agit en outre du rapport basé sur la 9^e Révision de la *Classification internationale des maladies* (CIM-9), qui a été publiée au Canada en 1979. La restructuration de la Classification et quelques changements dans les critères internationaux de sélection des causes ont amené une rupture de continuité avec les révisions précédentes. Par conséquent, des comparaisons entre les données sont difficiles. Toute comparaison directe des catégories de la CIM-9 avec celles des autres révisions, que ce soit selon le numéro de la catégorie ou selon le nom de la maladie, devrait être faite en référence à la fois à la CIM-9 et aux classifications précédentes. À cet égard, une attention particulière devrait être portée à certaines catégories ou sections de la CIM-9, notamment la catégorie 558, qui contient des maladies précédemment classées dans le chapitre des maladies infectieuses; la catégorie 579, qui contient certaines maladies que l'on trouvait précédemment dans le chapitre des troubles endocriniens; les catégories 390-398 et 424, où l'on ne suppose plus que certaines maladies sont d'origine rhumatismale; les

429 where changes in the assignment of terms and in the linkage rules have caused a change in the case distribution; the categories for asthma, bronchitis, and emphysema (490- 493) where linkage is no longer possible; the section entitled "Pregnancy with Abortive Outcome" (630-639) which now includes ectopic pregnancies; the chapter on perinatal conditions where the age restriction has been changed; and the symptoms chapter where certain symptoms have been removed and placed in other chapters relating to specific systems.

The present edition is identical to the previous (1984) edition in both form and content. As indicated in the Introduction to the 1970 report, the reader is cautioned that: because of space limitations the titles of disease categories and sub-categories have been arbitrarily condensed, where necessary, from those appearing in the ICD-9 manual; as in previous editions the three- and four-digit categories for which there were no deaths in the current year have been excluded. The reader is further cautioned that since there was considerable restructuring of the 9th Revision of the International Classification - ICD-9, a direct comparison of categories with previous revisions, either by category number or disease title, cannot, in all cases, be made without reference to the previous classification(s).

catégories 401, 402, 414 et 429, où des changements dans l'attribution des noms des maladies et dans les critères de regroupement sont à l'origine d'une redistribution des cas; les catégories de l'asthme, de la bronchite et de l'emphysème (490-493), qui sont dorénavant distinctes; la section intitulée "Grossesse aboutissant à l'avortement" (630-639), qui comprend maintenant les grossesses ectopiques; le chapitre sur les affections périnatales, où les groupes d'âge ont été modifiés; et le chapitre sur les symptômes, dont certains ont été placés dans d'autres chapitres relatifs à des syndromes précis.

Cette édition est identique à la précédente (1984), à la fois par sa forme et par son contenu. Comme il a été mentionné dans l'Introduction au rapport de 1970, rappelons que, faute d'espace, les titres des catégories et des sous-catégories de maladies ont été condensés arbitrairement au besoin; en outre, comme dans les éditions antérieures, les catégories auxquelles aucun décès n'a été attribuable durant l'année visée sont exclues. Par ailleurs, comme il y a eu restructuration considérable de la CIM, une comparaison directe de la 9^e Révision avec les autres, que ce soit selon les catégories ou les titres de maladie, ne peut en aucun cas être faite sans référence aux classifications précédentes.

METHODOLOGICAL NOTE

Data Compilation

Under a federal-provincial agreement the registration of births, stillbirths, marriages and deaths is the responsibility of the provinces and territories under the appropriate Vital Statistics and other related acts. These acts require not only that the events themselves be reported within a prescribed time but also that certain uniform items of statistical information be recorded. Under this agreement microfilm copies of the registrations are supplied to Statistics Canada for compilation of national vital statistics. Subsequent changes to registrations due to errors or omissions are transmitted to Statistics Canada by means of an appropriate document.

In addition, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia supply machine readable statistical abstracts of the events registered.

Data Processing

Statistics Canada converts to machine readable form data for the Atlantic provinces and the Territories. In addition Statistics Canada codes the cause of death, and other data for Newfoundland and the Territories.

Prior to tabulation all machine readable vital statistics data are subjected to a computer edit. The computer edit identifies all records where the coded information does not match predetermined values or ranges of values and where certain correlations among coded data items do not meet specified rules. All records so identified, are compared to corresponding registrations.

NOTE MÉTHODOLOGIQUE

Compilation des données

À la suite d'un accord fédéral-provincial, c'est aux provinces et aux territoires qu'il incombe d'enregistrer les naissances, les mortinaissances, les mariages et les décès, conformément aux lois concernant la statistique de l'état civil et aux autres lois connexes. En vertu de ces lois, il faut non seulement que ces faits soient déclarés dans un délai prescrit mais aussi que certains éléments d'information statistique soient enregistrés. Aux termes de l'accord, les microfilms des enregistrements sont remis à Statistique Canada qui compile la statistique de l'état civil à l'échelle nationale. Les changements ultérieurs apportés aux enregistrements à la suite d'erreurs ou d'omissions sont communiqués à Statistique Canada au moyen d'un document approprié.

De plus, le Québec, l'Ontario, le Manitoba, la Saskatchewan, l'Alberta et la Colombie-Britannique fournissent des analyses statistiques des renseignements enregistrés qui sont lisibles par une machine.

Traitement des données

Statistique Canada convertit dans une forme lisible par une machine les données qui proviennent des provinces de l'Atlantique et des Territoires et code en outre les causes des décès et d'autres données provenant de Terre-Neuve et des Territoires.

Avant la totalisation, toutes les données de la statistique de l'état civil lisibles par une machine sont soumises à une vérification mécanographique qui repère tous les enregistrements où les renseignements codés ne correspondent pas aux valeurs ou aux gammes de valeurs prédéterminées et où certaines corrélations entre les éléments des données codées ne satisfont pas aux règles prescrites. Toutes les données ainsi identifiées sont comparées aux bulletins correspondants.

Quality and Coverage

The most recent study of completeness of coverage was done in 1939 at which time it was estimated that in excess of 90% of all events were registered. Because of subsequent administrative and legal developments it is assumed that coverage is nearly 100%. Reports^{1,2} have been prepared for 1976 and 1979 which present quality measurements with respect to major demographic and medical characteristics of vital data. The 1976 report is available upon request and the 1979 report will be available when finalized.

Because of operational considerations "cut-off" dates have been established. Records received after the "cut-off" date are not statistically tabulated. The impact of this practice is being assessed.

Qualité et champ d'observation

La dernière évaluation de la couverture de l'enquête remonte à 1939 et, à cette époque, il a été estimé que plus de 90% de tous les cas avaient été relevés. Par suite de modifications administratives et législatives qui ont été apportées de 100%. Il existe deux rapports^{1,2} sur les données de 1976 et 1979 qui présentent une évaluation de la qualité des principales caractéristiques démographiques et médicales de l'état civil. On peut se procurer sur demande le rapport de 1976 et le rapport de 1979 sera disponible dès qu'on disposera de la version finale.

Vu les impératifs de l'exploitation, des dates limites d'inclusion ont été fixées. Les renseignements reçus après ces dates ne sont pas totalisés statistiquement. L'incidence de cette façon d'agir fait actuellement l'objet d'une évaluation.

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Vital Statistics and Disease Registries Section,
Health Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-1769)
or to the Statistics Canada reference centre in:

| | | | |

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des statistiques de l'état civil et des registres des maladies,
Division de la santé,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-1769) ou au
centre de consultation de Statistique Canada à:

| | | | |

Data Highlights

Canada (Text Table I)

- A total of 184,224 deaths were recorded in Canada in 1986. The number of deaths is influenced by the growth and aging of the population, and has risen virtually each year since 1950.¹
- The age-adjusted death rate² of 582 deaths (per 100,000 population) in 1986 represents a slight increase over rates in the previous two years and signals that a plateau has been reached after more than three decades of declining death rates in Canada.

¹ 1950 is the earliest year for which computerized mortality data are available.

² These rates eliminate the effects of changes in the age structure, such as aging, in the population. They are expressed per 100,000 population. The standard population is that of Canada in 1971.

Faits saillants

Canada (Tableau explicatif I)

- On a enregistré au total 184,224 décès au Canada en 1986. La croissance et le vieillissement de la population exercent une influence sur le nombre de décès, qui s'est accru virtuellement chaque année depuis 1950¹.
- Le taux de mortalité comparatif², qui était de 582 décès (par 100,000 habitants) en 1986, est en légère hausse par rapport au taux des deux années précédentes, ce qui indique qu'un plateau a été atteint après plus de trois décennies de baisse du taux de mortalité au Canada.

¹ 1950 est la première année pour laquelle nous disposons de données informatisées sur la mortalité.

² Ce taux fait abstraction de la variation de la structure par âge de la population, telle que le vieillissement. Il est exprimé pour 100,000 habitants. La population-type est celle du Canada en 1971.

| 1984 | 175,727 | 97,872 | 77,855 | 578.7 | 692.5 | 478.6 | 1.45 |
| 1985 | 181,323 | 100,460 | 80,863 | 579.7 | 693.5 | 481.0 | 1.44 |
| 1986 | 184,224 | 100,969 | 83,255 | 581.7 | 690.3 | 487.4 | 1.42 |

- Men have substantially higher death rates than women: a male-female ratio of 1.4³ in 1986. From 1950 to the early eighties the sex differential widened (from a ratio of 1.1 to nearly 1.5) as age-adjusted death rates fell much faster for women than men. In recent years, however, the gap has narrowed slightly.

- Les hommes ont un taux de mortalité substantiellement plus élevé que celui des femmes: on constate en 1986 un rapport hommes – femmes de 1.4³. De 1950 jusqu'au début des années 80, l'écart entre les sexes s'est élargi (d'un rapport de 1.1 à un rapport atteignant presque 1.5), car le taux de mortalité comparatif a diminué beaucoup plus rapidement chez les femmes que chez les hommes. Toutefois, au cours des dernières années, on a constaté un léger rétrécissement de l'écart.

The Provinces (Text Table II and Figure I)

- The age-adjusted death rates in 1986 tended to be above the national average in Quebec and the provinces east of Quebec. They were below average in Ontario and western Canada.
- From 1981 to 1986, death rates decreased in all provinces but Prince Edward Island and the Northwest Territories.

Les provinces (Tableau explicatif II et Figure I)

- Le taux de mortalité comparatif tendait en 1986 à dépasser la moyenne nationale au Québec et dans les provinces situées à l'est du Québec. Il était au-dessous de la moyenne nationale en Ontario et dans l'Ouest canadien.
- De 1981 à 1986, le taux de mortalité a diminué dans toutes les provinces, sauf à l'île du Prince-Édouard et dans les Territoires du Nord-Ouest.

³ Ratio of age-adjusted rates.

³ Rapport entre les taux comparatifs.

Age-adjusted Death Rates, Canada and the Provinces, 1986

Taux de mortalité ajustés pour l'âge, Canada et provinces, 1986

THE LEADING CAUSES OF DEATH

(Text Table III and Figures II and III)

Cardiovascular disease⁴

- Cardiovascular disease remained the leading cause of death in men and women in Canada, accounting for 43% of deaths in 1986. Deaths from heart disease, the major component of cardiovascular disease, were responsible for almost one-third of deaths. Cerebrovascular disease (stroke) accounted for 7.6% of deaths.
- In the last five years, age-adjusted death rates for cardiovascular disease fell by 14%, continuing the marked decline which started in the 1960's⁵. It is not clear if the decline is explained by a reduction in risk factors (such as cigarette smoking, high blood pressure, high cholesterol and obesity) and thus a lower

PRINCIPALES CAUSES DE DÉCÈS

(Tableau explicatif III et Figures II et III)

Maladies cardio-vasculaires⁴

- Les maladies cardio-vasculaires demeurent la principale cause de décès des hommes et des femmes au Canada, ayant causé 43% des décès en 1986. Les décès dus aux maladies du cœur, principale composante des maladies cardio-vasculaires, représentaient presque le tiers de tous les décès. La maladie vasculaire cérébrale (hémorragie cérébrale) a causé 7.6% des décès.
- Au cours des cinq dernières années, le taux comparatif de mortalité pour les maladies cardio-vasculaires a diminué de 14%, prolongeant ainsi une baisse marquée ayant débuté au cours des années 60⁵. Il est difficile de déterminer si la baisse peut s'expliquer par une

⁴ Cardiovascular disease refers to International Classification of Diseases (ICD-9) codes 390-459.

⁵ For a documentation of long-term trends in mortality see the report "Cardiovascular Disease in Canada", E. Nicholls, C. Nair, et al. Statistics Canada, Catalogue 82-544, Ottawa, 1986.

⁴ Les maladies cardio-vasculaires correspondent aux codes 390-459 de la Classification internationale des maladies (CIM-9).

⁵ Pour obtenir l'analyse des tendances à long terme de la mortalité, se reporter au rapport "Maladies cardio-vasculaires au Canada", E. Nicholls, C. Nair, et al., Statistique Canada, n° 82-544 au catalogue, Ottawa, 1986.

incidence of disease, by reduced severity, by improved treatment, or by a combination of these factors.

réduction des facteurs de risque (comme la consommation de cigarettes, la pression artérielle élevée, le taux élevé de cholestérol et l'obésité), et donc une incidence plus faible des maladies, par une diminution de la gravité de ces dernières, par l'amélioration de leur traitement, ou par une combinaison de ces facteurs.

Cancer

- Cancer is the second leading cause of death in Canadian men and women. It was responsible for one quarter of all deaths in 1986. Lung cancer (33% of cancer deaths in men) and breast cancer (20% of cancer deaths in women) predominate among cancer deaths.
- Le cancer représente la deuxième cause de décès des Canadiens et des Canadiennes et a été responsable en 1986 d'un quart de l'ensemble des décès. Le cancer du poumon (33% des décès attribuables au cancer chez les hommes) et le cancer du sein (20% des décès attribuables au cancer chez les femmes) ont causé le plus grand nombre de décès dus à cette maladie.

- Age-adjusted death rates for all cancers increased slightly, by 4.5% in men and by 4.1% in women, between 1981 and 1986. For men this is a continuation of the trend of steadily increasing rates since 1950. For women, the increases are recent, observed in the last decade only, and are a reversal of the earlier trend of slowly decreasing rates. Rates for men and women less than 65 years old are however stable – the overall increase is due to increases in the death rate at older ages.
- Lung cancer death rates in men have levelled off in recent years. Steep increases had been recorded over the last five decades but age-adjusted rates appear to have reached a peak (57.9 deaths per 100,000 men) in 1984 and the first slight decrease was reported in 1985. Lung cancer death rates in women are still rising steeply, particularly at ages over 65 where they increased by 47% from 1981 to 1986. The role of cigarette smoking as a risk factor for lung cancer has been firmly established: large increases in lung cancer rates appeared, with a time lag of at least two decades, after large increases in cigarette usage⁶. The recent levelling off of lung cancer mortality rates in males in a number of countries has been attributed to a reduction in smoking. The effect of filter- and low-tar cigarettes has been more difficult to study but there is some evidence that use of these types of cigarettes reduces lung cancer risk⁷.
- Age-adjusted death rates for breast cancer in women have remained virtually unchanged between 1950 and 1984 but showed slight increases in the last two years.
- Le taux comparatif de mortalité attribuable à tous les cas de cancer a augmenté légèrement, de 4.5% chez les hommes et de 4.1% chez les femmes, entre 1981 et 1986. Pour les hommes, il s'agit d'une continuation de l'accroissement du taux, ininterrompue depuis 1950. Pour les femmes, cet accroissement est récent, puisqu'il n'a été observé que durant la dernière décennie, et représente un renversement de la tendance à une diminution lente du taux constatée précédemment. Les taux pour les hommes et les femmes âgés de moins de 65 ans sont toutefois stables – l'accroissement général est dû à l'augmentation du taux de mortalité chez les personnes plus âgées.
- Le taux de mortalité attribuable au cancer du poumon chez les hommes s'est stabilisé au cours des dernières années. On a enregistré au cours des cinq dernières décennies des augmentations marquées, mais le taux comparatif semble avoir atteint un sommet (57.9 décès par 100,000 hommes) en 1984, pour laisser place en 1985 à la première légère diminution. Le taux de mortalité attribuable au cancer du poumon chez les femmes augmente encore de façon marquée, particulièrement chez les femmes âgées de plus de 65 ans, chez qui on a constaté une augmentation de 47% entre 1981 et 1986. On a établi clairement le rôle de la cigarette comme facteur de risque pour le cancer du poumon: les augmentations importantes du taux de cancer du poumon sont apparues, avec un décalage d'au moins deux décennies, après d'importantes augmentations dans la consommation de cigarettes⁶. La récente stabilisation du taux de mortalité dû au cancer du poumon chez les hommes dans un certain nombre de pays a été attribuée à une diminution de la consommation de tabac. Il a été plus difficile d'étudier l'effet des cigarettes à bout filtre et à faible teneur en goudron, mais certains faits nous indiquent que la consommation de ces types de cigarettes réduit les risques de cancer du poumon⁷.
- Le taux comparatif de mortalité pour le cancer du sein chez les femmes est demeuré virtuellement inchangé entre 1950 et 1984, mais a fait l'objet d'une légère augmentation au cours des deux dernières années.

⁷ Op. cit., pp. 217-220.

Respiratory Diseases

- Since 1985, deaths from respiratory diseases (8.1% of deaths in 1986) have outnumbered those due to accidents⁸(7.5%).
- Age-adjusted death rates for respiratory diseases rose, albeit unevenly, by 17% in the last five years. Chronic obstructive lung disease as well as pneumonia and influenza were responsible for this increase. As was observed for cancer, in persons under 65 years rates were stable while large increases (27% from 1981 to 1986) occurred at older ages.

Accidents

- While accidental deaths ranked fourth overall, they ranked third in men (9.4% of deaths), followed by respiratory diseases (8.8% of deaths). In women, respiratory diseases (7.3% of deaths) took more lives than accidents (5.1% of deaths).
- Age-adjusted death rates for all accidents, which had been on the decrease in the last ten years, have levelled off in the most recent years. Rates for fatal motor vehicle accidents, (29% of all accidental deaths in 1986), continued their downward trend which started in the mid-seventies. This reduction in risk has been attributed to the lowering of speed limits (implemented in 1976-1977) and mandatory use of seat belts, (implemented over the period 1976-1986 in most provinces)⁹.

Leading Causes of Death at Different Ages

- In infants under one year old, causes specific to the perinatal period and congenital anomalies cause almost three in four deaths.

⁸ Accidents refers to all External Causes of Injury and Poisoning, International Classification of Disease (ICD-9) codes E800-E999.

⁹ "Recent Canadian Mortality Trends", P. Ku, E. Smith, Y. Mao in Chronic Diseases in Canada, Vol. 7, No. 3, December 1986.

Maladies respiratoires

- Depuis 1985, les décès causés par les maladies respiratoires (8.1% des décès en 1986), surpassent en nombre ceux causés par les accidents⁸ (7.5%).
- Le taux comparatif de mortalité attribuable aux maladies respiratoires a augmenté, quoique de manière inégale, de 17% au cours des cinq dernières années. Cette augmentation est causée par la bronchopneumopathie chronique obstructive, ainsi que par la pneumonie et la grippe. Comme on l'a observé pour le cancer, le taux est demeuré stable chez les personnes âgées de moins de 65 ans, alors que de fortes augmentations ont été constatées (27% de 1981 à 1986) chez les personnes plus âgées.

- Alors que les décès causés par les accidents se classaient dans l'ensemble en quatrième place, ils occupaient la troisième place chez les hommes (9.4% des décès), suivis des maladies respiratoires (8.8% des décès). Chez les femmes, les maladies respiratoires (7.3% des décès) ont causé plus de décès que les accidents (5.1% des décès).

- Le taux comparatif de mortalité attribuable à tous les accidents, pour lequel on a constaté une diminution au cours des dix dernières années, s'est stabilisé au cours des plus récentes années. Le taux de mortalité attribuable aux accidents mortels de circulation (29% de l'ensemble des décès accidentels en 1986), a continué la baisse amorcée au milieu des années soixante-dix. On a attribué cette diminution des risques à la baisse des vitesses-limites (mise en application en 1976-1977) et à l'utilisation obligatoire des ceintures de sécurité (imposée dans la plupart des provinces au cours de la période comprise entre 1976 et 1986)⁹.

Principales causes de décès aux différents âges

- Chez les bébés âgés de moins d'un an, trois décès sur quatre peuvent être attribués à des causes propres à la période périnatale, ainsi qu'aux anomalies congénitales.

⁸ Les accidents correspondent aux causes extérieures de traumatismes et d'empoisonnements, Classification internationale des maladies (CIM-9), codes E800-E999.

⁹ Tendances récentes de la mortalité au Canada", P. Ku, E. Smith, Y. Mao dans "Maladies chroniques au Canada".

- In children and young adults, from 1 to 24 years of age, accidents cause most loss of life. They were responsible for almost three out of four deaths in males and just over one half of all deaths in females in the age range.
- In the middle age range, from 25 to 64 years, cancer is the leading cause of death in women (48% of all deaths) while cardiovascular disease (34% of deaths) leads in men.
- At ages over 65 years, the leading cause of death in both men and women is cardiovascular disease (one half of all deaths), followed by cancer (23% of deaths).

- Chez les enfants et les jeunes adultes, âgés d'1 à 24 ans, les accidents causent la majorité des pertes de vie. On peut leur attribuer presque trois décès sur quatre chez les hommes, et un peu plus de la moitié des décès chez les femmes de ce groupe d'âge
- Dans le groupe d'âge moyen, qui s'étend de 25 à 64 ans, le cancer est la principale cause de décès chez les femmes (48% de l'ensemble des décès), tandis que les maladies cardio-vasculaires (34% des décès) dominent chez les hommes.
- Chez les personnes âgées de plus de 65 ans, la principale cause de décès, tant chez les hommes que chez les femmes, réside dans les maladies cardio-vasculaires (la moitié de l'ensemble des décès), suivies du cancer (23% des décès).

LIFE EXPECTANCY

Life expectancy has continued to increase for Canadian males and females since the 1980-1982 period¹⁰. According to preliminary abridged life tables¹¹, life expectancy at birth has reached 73 years for men and almost 80 years for women (Text Table IV). Between 1980-82 and 1984-86 males have gained 0.32 years more than females. Although the expectation of life at birth for both males and females has converged by half a year during the 1975 to 1986 period, female life expectancy remains nearly seven years greater than that for males.

ESPÉRANCE DE VIE

L'espérance de vie a continué à s'accroître pour les Canadiens et les Canadiennes depuis 1980-1982¹⁰. Selon les tables de mortalité abrégées préliminaires¹¹, l'espérance de vie à la naissance a atteint 73 ans pour les hommes et presque 80 ans pour les femmes (Tableau explicatif IV). Entre 1980-1982 et 1984-1986, les hommes ont acquis 0.32 année de plus que les femmes. Même si l'écart entre l'espérance de vie des hommes et celle des femmes à la naissance a diminué d'une demi-année entre 1975 et 1986, l'espérance de vie des femmes est encore de près de sept années supérieure à celle des hommes.

10 A detailed examination of the evolution of life expectancy in Canada can be found in the publication Longevity and Historical Life Tables, 1921-1981 (Abridged), Canada and Provinces (89-506).

11 Prepared from age sex-specific counts of death occurring during the 1984-1986 period and centred on the June 1, 1985 population estimates (from the Population Estimates Section, Demography Division).

10 On peut trouver un examen détaillé de l'évolution de l'espérance de vie au Canada dans la publication ayant pour titre: Longévité et tables de mortalité chronologiques (Abrégées) 1921-1981, Canada et Provinces (89-506).

11 Préparées à partir du nombre de décès, selon l'âge et le sexe, survenus au cours de 1984-1986, et fondées sur les estimations démographiques du 1er juin 1985 (fournies par la Section de l'estimation démographique, Division de la démographie).

TEXT TABLE IV. Life Expectancy at Birth: Canadian Males and Females, 1975-1977 to 1984-1986

TABLEAU EXPLICATIF IV. Espérance de vie à la naissance: Canadiens et Canadiennes, 1975-1977 à 1984-1986

| | Years Années | | Change in years Variation en années | | |
|--|------------------|------------------|--|-------------------------|-------------------------|
| | 1975- 1977(1) | 1980- 1982(1) | 1984- 1986 | 1980-1982/ 1975-1977 | 1984-1986/ 1980-1982 |
| Males - Hommes | 70.19 | 71.88 | 73.00 | 1.69 | 1.12 |
| Females - Femmes | 77.48 | 78.98 | 79.78 | 1.50 | .80 |
| Male-female difference - Différence hommes- femmes | - 7.29 | - 7.10 | - 6.78 | 0.19 | .32 |

(1) Sources: 1975-1977 and 1980-1982 issues of Life Tables, Canada and Provinces, Health Division, Catalogue 84-532. Tables de mortalité, Canada et provinces, 1975-1977 et 1980-1982, Division de la santé, n° 84-532 au catalogue.

POTENTIAL YEARS OF LIFE LOST

Compared to the count of deaths, the measure of potential years of life lost (PYLL)¹² gives heavier weight to deaths at younger ages and thus serves as a useful indicator of premature death. Several contrasts emerge when leading causes of PYLL before age 75 are compared with the leading causes of death in 1986 (Text Table V).

- Cancer and heart diseases have a much smaller impact on PYLL than on the number of deaths. While these causes accounted for 60% of deaths below age 75 in Canada in 1986, they represented just 42% of potential years of life lost.
- Accidents and suicide, in contrast, are much more prominent as a cause of PYLL. They caused 12% of deaths before age 75 but more than twice this proportion, 25%, of potential years of life lost.

¹² This calculation is applied to deaths occurring between birth and age 75, multiplying the number of deaths in a specific age group by the remaining years of life to age 75.

NOMBRE D'ANNÉES POTENTIELLES DE VIE PERDUES

Si on le compare au nombre de décès, le nombre d'années potentielles de vie perdues (APVP)¹² permet d'appliquer un plus fort coefficient de pondération aux décès qui surviennent à un âge peu avancé. Il représente donc un indicateur utile du chiffre des décès prématurés. On peut remarquer plusieurs différences si l'on compare les causes principales d'APVP avant l'âge de 75 ans aux causes principales des décès en 1986 (Tableau explicatif V).

- Le cancer et les maladies du cœur ont un effet beaucoup moins grand sur l'APVP que sur le nombre des décès. Alors qu'on pouvait attribuer à ces causes 60% des décès survenus avant l'âge de 75 ans au Canada en 1986, on ne pouvait leur attribuer que 42% des années potentielles de vies perdues.
- Les accidents et suicide, au contraire, occupent parmi les causes d'APVP une place beaucoup plus importante. Ils ont causé 12% des décès survenus avant l'âge de 75 ans, mais 25%, soit plus du double de ce pourcentage, des années potentielles de vie perdues.

¹² Ce calcul s'applique aux décès qui surviennent entre la naissance et l'âge de 75 ans, et consiste en la multiplication du nombre de décès observés dans un groupe d'âge donné par le nombre restant d'années de vie jusqu'à l'âge de 75 ans.

TEXT TABLE V. Potential Years of Life Lost (PYLL) and Deaths by Selected Causes, Canada, 1986

TABLEAU EXPLICATIF V. Années potentielles de vie perdues (APVP) et nombre de décès par cause, Canada, 1986

| Cause of Death Cause de décès | PYLL between 0 and 75 years APVP entre 0 et 75 ans | | Deaths between 0 and 75 years Décès entre 0 et 75 ans | |
|--|---|-------------------------|--|--------------------------|
| | Number | Per cent of PYLL | Number | Per cent of deaths |
| | Nombre | Pourcentage des APVP | Nombre | Pourcentage des décès |

Introduction

The official mortality statistics for Canada are published, at different levels of detail, in three annual reports: Births and Deaths, Vital Statistics Volume I, Mortality: Summary List of Causes, Vital Statistics Volume III and the present report, Causes of Death. Two precursors of this report, Causes of Death, Canada, 1950-1960 (Catalogue 84-514) and Causes of Death, Canada, 1958-1964 (Catalogue 84-519) provided national totals on the numbers of deaths according to the (detailed) three-digit categories and four-digit sub-categories of the 6th and 7th Revisions of the International Classification of Diseases.

To meet the demand for more current and still further detailed data on causes of death, these publications were converted to a regular annual report beginning with the 1965 data year and the report was expanded to include information on detailed causes of death by sex and province of residence of the decedent and by sex and five-year age groups for Canada. The present report is the 22nd such report in this expanded series.

This report is based on the 9th Revision of the International Classification of Diseases (ICD-9) which was put into effect in Canada in 1979. Restructuring of the Classification and some changes in the international underlying cause selection rules have resulted in some break in continuity with previous revisions. Therefore, comparisons of data coded by more than one revision are difficult. Any direct comparisons of ICD-9 categories with previous revisions, either by category number or disease title, should be made with reference to both the ICD-9 and the previous classification(s). In this respect, particular care should be taken with certain categories or sections of the ICD-9, these include; category 558 which contains conditions previously classified to the infectious disease chapter; category 579 which includes some conditions previously found in the chapter on endocrine disorders; categories 390-398 and 424 where assumptions of rheumatic origin are no longer made for certain conditions; categories 401- 402, 414 and 429 where changes in the assignment of terms and in the linkage rules have caused a change in the case distribution; the categories for asthma, bronchitis, and emphysema (490-493) where linkage is no longer possible; the section entitled "Pregnancy

Les statistiques officielles concernant la mortalité sont présentées, à divers niveaux d'agrégation, dans trois rapports annuels: Naissances et décès: La statistique de l'état civil, volume I, Mortalité: Liste sommaire des causes: La statistique de l'état civil, volume III et le présent rapport, Causes de décès. Avant la publication du présent ouvrage, deux rapports, Causes de décès, Canada 1950-1960 (n° 84-514 au catalogue) et Causes de décès, Canada 1958-1964 (n° 84-519 au catalogue), qui fournissaient des totaux nationaux concernant le nombre de décès, selon les catégories détaillées à trois chiffres et les sous-catégories à quatre chiffres des 6^e et 7^e Révisions de la Classification internationale des maladies.

Afin de satisfaire à la demande de données plus récentes et encore plus détaillées sur les causes de mortalité, ces publications furent converties, à partir de 1965, en un rapport annuel régulier qui fut élargi pour inclure des renseignements sur les causes détaillées des décès, selon le sexe et la province de résidence de la personne décédée, et selon le sexe et les tranches d'âge de cinq ans pour le Canada. Le présent rapport est le 22^e de cette série.

Il s'agit en outre du rapport basé sur la 9^e Révision de la Classification internationale des maladies (CIM-9), qui a été publiée au Canada en 1979. La restructuration de la Classification et quelques changements dans les critères internationaux de sélection des causes ont amené une rupture de continuité avec les révisions précédentes. Par conséquent, des comparaisons entre les données sont difficiles. Toute comparaison directe des catégories de la CIM-9 avec celles des autres révisions, que ce soit selon le numéro de la catégorie ou selon le nom de la maladie, devrait être faite en référence à la fois à la CIM-9 et aux classifications précédentes. À cet égard, une attention particulière devrait être portée à certaines catégories ou sections de la CIM-9, notamment la catégorie 558, qui contient des maladies précédemment classées dans le chapitre des maladies infectieuses; la catégorie 579, qui contient certaines maladies que l'on trouvait précédemment dans le chapitre des troubles endocriniens; les catégories 390-398 et 424, où l'on ne suppose plus que certaines maladies sont d'origine rhumatismale; les catégories 401, 402, 414 et 429, où des changements dans l'attribution des noms des maladies et dans les critères de regroupement sont à l'origine d'une redistribution des cas; les catégories de l'asthme, de la bronchite et de l'emphysème (490-

with Abortive Outcome" (630-639) which now includes ectopic pregnancies; the chapter on perinatal conditions where the age restriction has been changed; and the symptoms chapter where certain symptoms have been removed and placed in other chapters relating to specific systems.

With the exception of a new Data Highlights Section, the present edition is identical to the previous (1985) edition in both form and content. As indicated in the Introduction to the 1970 report, the reader is cautioned that: because of space limitations the titles of disease categories and sub-categories have been arbitrarily condensed, where necessary, from those appearing in the ICD-9 manual; as in previous editions, the three and four-digit categories for which there were no deaths in the current year have been excluded.

493), qui sont dorénavant distinctes; la section intitulée "Grossesse aboutissant à l'avortement" (630-639), qui comprend maintenant les grossesses ectopiques; le chapitre sur les affections périnatales, où les groupes d'âge ont été modifiés; et le chapitre sur les symptômes, dont certains ont été placé dans d'autres chapitres relatifs à des syndromes précis.

Sauf pour ce qui est de la nouvelle section des faits saillants, cette édition est identique à la précédente (1985), à la fois par sa forme et par son contenu. Comme il a été mentionné dans l'Introduction au rapport de 1970, rappelons que, faute d'espace, les titres des catégories et des sous-catégories de maladies ont été condensés arbitrairement au besoin; en outre, comme dans les éditions antérieures, les catégories auxquelles aucun décès n'a été attribuable durant l'année visée sont exclues. Par ailleurs, comme il y a eu restructuration considérable de la CIM, une comparaison directe de la 9^e Révision avec les autres, que ce soit selon les catégories ou les titres de maladie, ne peut en aucun cas être faite sans référence aux classifications précédentes.

Methodological Note

Data Compilation

Under a federal-provincial agreement the registration of births, stillbirths, marriages and deaths is the responsibility of the provinces and territories under the appropriate Vital Statistics and other related acts. These acts require not only that the event themselves be reported within a prescribed time but also that certain uniform items of statistical information be recorded. Under this agreement microfilm copies of the registrations are supplied to Statistics Canada for compilation of national vital statistics. Subsequent changes to registrations due to errors or omissions are transmitted to Statistics Canada by means of an appropriate document.

In addition, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia supply machine readable statistical abstracts of the events registered.

Data Processing

Statistics Canada converts to machine readable form data for the Atlantic provinces and the Territories. In addition Statistics Canada codes the cause of death, and other data for Newfoundland and the Territories.

Prior to tabulation all machine readable vital statistics data are subjected to a computer edit. The computer edit identifies all records where the coded information does not match predetermined values or ranges of values and where certain correlations among coded data items do not meet specified rules. All records so identified are compared to corresponding registrations.

Quality and Coverage

The most recent study of completeness of coverage was done in 1939 at which time it was estimated that in excess of 90% of all events were registered. Because of subsequent administrative and legal developments it is

Note méthodologique

Compilation des données

À la suite d'un accord fédéral-provincial, c'est aux provinces et aux territoires qu'il incombe d'enregistrer les naissances, les mortinaissances, les mariages et les décès, conformément aux lois concernant la statistiques de l'état civil et aux autres lois connexes. En vertu de ces lois, il faut non seulement que ces faits soient déclaré dans un délai prescrit mais aussi que certains éléments d'information statistique soient enregistrés. Aux termes de l'accord, les microfilms des enregistrements sont remis à Statistique Canada qui compile la statistique de l'état civil à l'échelle nationale. Les changements ultérieurs apportés aux enregistrements à la suite d'erreurs ou d'omissions sont communiqués à Statistique Canada au moyen d'un document approprié.

De plus, le Québec, l'Ontario, le Manitoba, la Saskatchewan, l'Alberta et la Colombie-Britannique fournissent des analyses statistiques des renseignements enregistrés qui sont lisibles par une machine.

Traitement des données

Statistique Canada convertit dans une forme lisible par une machine les données qui proviennent des provinces de l'Atlantique et des Territoires et code en outre les causes des décès et d'autres données provenant de Terre-Neuve et des Territoires.

Avant la totalisation, toutes les données de la statistique de l'état civil lisibles par une machine sont soumises à une vérification mécanographique qui repère tous les enregistrements où les renseignements codés ne correspondent pas aux valeurs ou aux gammes de valeurs prédéterminées et où certaines corrélations entre les éléments des données codées ne satisfont pas aux règles prescrites. Toutes les données ainsi identifiées sont comparées aux bulletins correspondants.

Qualité et champ d'observation

La dernière évaluation de la couverture de l'enquête remonte à 1939 et, à cette époque, il a été estimé que plus de 90% de tous les cas avaient été relevés. Par suite de modifications administratives et législatives qui ont été apportées de 100%. Il

assumed that coverage is nearly 100%. Reports^{1,2} have been prepared for 1976 and 1979 which present quality measurements with respect to major demographic and medical characteristics of vital data. The 1976 report is available upon request and the 1979 report will be available when finalized.

Because of operational considerations "cut-off" dates have been established. Records received after the "cut-off" date are not statistically tabulated. The impact of this practice is being assessed.

- ¹ Content Analysis and Quality Assessment of Vital Statistics Data (A Pilot Study), a working paper, Health Division, Statistics Canada, 1981.
- ² Quality Assessment of Causes of Death and Stillbirths - data year 1979.

existe deux rapports^{1,2} sur les données de 1976 et 1979 qui présentent une évaluation de la qualité des principales caractéristiques démographiques et médicales de l'état civil. On peut se procurer sur demande le rapport de 1976 et le rapport de 1979 sera disponible dès qu'on disposera de la version finale.

Vu les impératifs de l'exploitation, des dates limites d'inclusion ont été fixées. Les renseignements reçus après ces dates ne sont pas totalisés statistiquement. L'incidence de cette façon d'agir fait actuellement l'objet d'une évaluation.

- ¹ Évaluation de la qualité des statistiques de l'état civil - (Étude-pilote), document de travail, Division de la santé, Statistique Canada, 1981.
- ² Évaluation de la qualité des données sur les causes de décès et de mortinaissances - année 1979.

TEXT TABLE VI. Population for Provinces by Sex and Canada by Age and Sex, 1986

TABLEAU EXPLICATIF VI. Population des provinces selon le sexe et du Canada selon l'âge et le sexe, 1986

| Province | | |
|---|-----------------|------------------|
| | Male Hommes | Female Femmes |
| | '000 | |
| Newfoundland - Terre-Neuve | 284.4 | 284.0 |
| Prince Edward Island - Île-du-Prince-Édouard | 62.9 | 63.7 |

Current Demographic Analysis

Catalogue 91-209E Annual

Report on the Demographic Situation in Canada 1986

Canada

BIRTH, DEATH, MARRIAGE, DIVORCE

Factors like these are explored in the **Report on the Demographic Situation in Canada, 1986**.

Using the latest demographic data, this report updates its well received predecessor. It is a dynamic portrait of Canada and her people, and provides special analytical sections on subjects like:

- language
- fertility and childbearing
- causes of mortality
- interprovincial migration

For the best insight into Canada's demographic scene, choose the **Report on the Demographic Situation in Canada, 1986**.

La Conjoncture démographique

Catalogue 91-209F Annual

Rapport sur l'état de la population du Canada 1986

Canada

NAISSANCES, DÉCÈS, MARIAGES, DIVORCES...

Des événements tels que ceux-ci font l'objet du **Rapport sur la situation démographique au Canada, 1986**.

Réalisé à partir des plus récentes données démographiques disponibles, ce rapport constitue une version à jour de la publication originale, qui avait été très bien accueillie. Il présente un portrait dynamique du Canada et de sa population et contient des analyses sur des sujets comme:

- la langue;
- la fécondité et la maternité;
- les causes de mortalité;
- la migration interprovinciale.

Afin de mieux saisir la réalité démographique canadienne, procurez-vous le **Rapport sur la situation démographique au Canada, 1986**

What does the average family do with \$30,000?

In 1984 the average family in Canada had a disposable income of \$30,000. **Income after Tax, Distribution by Size in Canada, 1984** classifies the after-tax income of Canadian families and individuals. Income data are given by size of income, region, source of income, family size, number of children, age and sex of the family head, and other characteristics.

Use this report to examine how different policies might affect different socio-economic groups. Study problems of the poor and elderly. Get an accurate reading of the purchasing power of Canadians.

Catalogue #13-210
\$20.00 in Canada

87 pages.

Que fait une famille type avec \$30,000?

En 1984, le revenu disponible d'une famille canadienne type était de

\$30,000. La publication **Revenu après impôt, répartition selon la taille du revenu au Canada, 1984** indique le revenu après impôt des familles et des particuliers canadiens. Les données sur le revenu sont présentées selon la taille du revenu, la région, la source de

revenu, la taille de la famille, le nombre d'enfants, l'âge et le sexe du soutien de famille et d'autres caractéristiques.

Ce rapport permet de déterminer l'incidence que peuvent avoir différentes politiques sur divers groupes socio-économiques. Il permet aussi d'étudier les problèmes que rencontrent les personnes pauvres et les personnes âgées et d'obtenir des données précises sur le pouvoir d'achat des Canadiens.
